Quick Indie Project

Rachel Hsiung

My thesis is currently based around the idea of transparency.

A lack of transparency is often at the core of many usability / user experience failures.

And a lack of transparency prevents many of us from making decisions on a daily basis.

How can we improve transparency in the MTA subway for the benefit of passengers?

This screen shows you where all the subway trains are in real-time.

When you tap on a particular train, you can see more information, like the train's next stop and ETA.
